

## QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Part shade.
USDA HARDINESS ZONES	3 to 9.
PLANT TYPE	Perennial.
PLANTING DISTANCE IN-GROUND	At least 2 feet apart.
CONTAINER SIZE	One plant per 12-inch or larger container.
MATURE HEIGHT / SPREAD	<b>Empress Wu:</b> 4 feet tall with a 4 to 6 foot spread. <b>Hosta Mix:</b> 1 to 2 feet tall with a 2 to 3 foot spread. <b>Wu-La-La:</b> 3 to 4 feet tall with a 5 to 6 foot spread.
BLOOM TIME	Midsummer.
TIME TO REACH MATURITY	12 to 24 months.
FACTS OF NOTE	Low maintenance. Drought tolerant once established. Great for planting under trees.

### SOIL PREPARATION

We recommend having your soil tested periodically by your local County Extension Office ([www.nifa.usda.gov/extension](http://www.nifa.usda.gov/extension) or by calling 1-800-333-4636). A soil test can determine if your soil needs any amendments to enhance the growth and performance of your plants.

Ideal garden soil is easy to dig in and drains well while still holding the nutrients and water vital to plant growth. To prepare a bed for in-ground planting, spade or till the soil to a depth of roughly 12-18 inches. Next, spread a 2-4 inch layer of organic matter such as compost, shredded leaves or peat moss over the soil and mix well.

# Thank you for your order!

### PLANT WARRANTY

We warrant perennials for 1 year and annuals for 90 days from the time of the original shipment. If for any reason you are dissatisfied, we will replace your plant with a similar or comparable one, at no charge. If your replacement is not available or it is too late in the season to ship, it will reship the following shipping season.

If you have any questions or concerns about your order, please contact us at 888-593-3644 or [help@cottagefarmsdirect.com](mailto:help@cottagefarmsdirect.com).

**Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of the plant that is not expressly grown to be eaten.**

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless, but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion contact a poison control center immediately.

# HOSTA

\*Image on cover is representative of the type of plant(s) in this offer and not necessarily indicative of actual size or color for the included variety.

## OUT OF THE BOX

### HOSTA

Your plants have been shipped to you in pots or a bare root state. We urge you to remove them from the shipping box and plant them as soon as possible. Should planting be delayed due to weather or other unforeseen circumstances, roll the plastic bag down around each potted plant and place them near a bright window or other sunny location. Keep them well-watered in their pots until permanently planted. For bare root plants, remove the paper bag and place them near a bright window or other sunny location. Keep the roots moist, but not soaking wet by using a spray bottle to mist them. Once planted, they begin setting roots and, as the weather warms, begin showing new growth. Please plant as soon as possible, provide reasonable care and be patient.

Occasionally, bare root plants may arrive with a small amount of mold on them. This is caused by temperature changes encountered in shipping and does not harm the plants. As long as the divisions are firm, simply wipe any mold off with a paper towel and plant them.

The foliage on potted plants may appear slightly wilted or yellow upon arrival. This is due to the stress of shipping and is usually nothing to worry about. Water the plant thoroughly, place it in a shady location for a few days and remove any foliage that does not recover.

BARE ROOT

POTTED

SHIPPED AS SHOWN

## PLANTING INSTRUCTIONS

### PLANTING BARE ROOT HOSTA

Dig a hole at least twice as deep and twice as wide as each bare root division. Place a mound of soil in the bottom of each hole and carefully spread the dormant bare roots over the mound. Cover completely with 1-2 inches of soil, firming the soil around the roots. Water thoroughly.

## PLANTING INSTRUCTIONS (Continued)

### PLANTING POTTED HOSTA

**Important:** Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

1. Remove and discard the clear plastic bag from around the pot.
2. After watering, remove the pot by holding the plant upside down in one hand and squeezing the sides of the pot with the other.
3. Prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork, or gardening tool and pruning any damaged roots. This will encourage the roots to begin growing outward into the new soil.
4. Dig a hole twice as deep and twice as wide as the plant's root ball. Partially backfill the hole with soil and place the plant into the hole. The top of the root ball should be level with the ground surrounding the hole. Refill the hole with soil, firming the soil around the plant with your fingers. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.
5. Water thoroughly.

## CONTINUING CARE

Adequate and consistent watering is essential during your plant's first year in the garden. Infrequent, long soakings of water that thoroughly saturate the soil are more effective than frequent, light applications of water.

Due to variable geographical and environmental conditions, a specific watering schedule is difficult to define. However, as a rule of thumb, you should not allow the soil or the original root ball to completely dry out. During the first summer, you may need to water as often as every few days in periods of drought and extreme summer heat. To determine if your plant needs water, dig a few inches into the soil next to the plant. If the soil is dry 2-3 inches below the surface, it is time to water.

Over-watering can be as damaging as under-watering. Be sure that the area surrounding your plant has adequate drainage to move water away from the plant. If you choose to plant in a container, always select one with drainage holes to prevent your plant's roots from sitting in water.

WATERING

## CONTINUING CARE (Continued)

WEEDING

Keep the area around your plants free of weeds. Weeds compete with surrounding plants for food, water and light. Walk around the garden periodically and pull weeds, including the roots, as soon as you see them.

MULCHING

Apply a 2-4 inch layer of shredded bark, compost, leaves, straw or other organic matter around your plants to promote moisture retention, maintain even soil temperatures and discourage weed growth. Replenish the mulch as needed.

PRUNING

Clip off any dead, damaged or unsightly growth as needed to maintain an attractive appearance. Remove spent flower stalks as blooms fade, leaving as much foliage as possible. Cut each plant back to the ground once the foliage has died back in late fall.

FEEDING

Feed your plants once every 2-3 weeks during the growing season with a water-soluble fertilizer. Discontinue feeding after September 1st so your plants can harden off for winter dormancy. Resume fertilizing when new growth appears in the spring.

DIVIDING

Dividing perennials encourages vigorous growth, prevents overcrowding, and promotes plant health. Divide hosta in early spring or fall by digging up a mature, 3-5 year old clump. Cut the roots with a shovel or sharp tool, making sure each division has plenty of roots. Plant the divisions back in the garden and water well.

WINTERIZING

Watering thoroughly in late fall will greatly enhance your plant's cold tolerance once the ground has frozen.

Hosta is winter hardy, but will benefit from mulching in cold areas. The time to winterize your plants is in late fall. When winterizing perennials, keep in mind that the root system is the most vulnerable to cold damage. Mulch heavily by mounding a 6-8 inch layer of shredded bark, compost, leaves, straw or other organic material over the crown of each plant. In very cold areas, containerized plants can be brought into an unheated, protected area such as a garage or cellar before temperatures drop below freezing. Check soil moisture every 2-3 weeks and water as needed during winter.

In spring, remove mulch from in-ground plantings. Containerized plants should be moved back out into the garden sunlight where they will begin to repeat their yearly garden performance.
