

## QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Full to part sun.
USDA HARDINESS ZONES	4 to 10.
PLANT TYPE	Perennial.
PLANTING DISTANCE IN-GROUND	At least 5 feet apart.
CONTAINER SIZE	One plant per 20-inch or larger container.
MATURE HEIGHT / SPREAD	2-N-1 New Dawn/Pinkie: 10 to 12 feet tall with a 4 to 6 foot spread. Pinata: 10 to 12 feet tall with a 4 to 6 foot spread.
BLOOM TIME	Summer to frost.
TIME TO REACH MATURITY	3 years.
FACTS OF NOTE	Fragrant. Heat tolerant and rabbit resistant. Great for cut flowers.

### SOIL PREPARATION

We recommend having your soil tested periodically by your local County Extension Office ([www.nifa.usda.gov/extension](http://www.nifa.usda.gov/extension) or by calling 1-800-333-4636). A soil test can determine if your soil needs any amendments to enhance the growth and performance of your plants.

Ideal garden soil is easy to dig in and drains well while still holding the nutrients and water vital to plant growth. To prepare a bed for in-ground planting, spade or till the soil to a depth of roughly 12-18 inches. Next, spread a 2-4 inch layer of organic matter such as compost, shredded leaves or peat moss over the soil and mix well.

# Thank you for your order!

### PLANT WARRANTY

We warrant perennials for 1 year and annuals for 90 days from the time of the original shipment. If for any reason you are dissatisfied, we will replace your plant with a similar or comparable one, at no charge. If your replacement is not available or it is too late in the season to ship, it will reship the following shipping season.

If you have any questions or concerns about your order, please contact us at 888-593-3644 or [help@cottagefarmdirect.com](mailto:help@cottagefarmdirect.com).

**Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of the plant that is not expressly grown to be eaten.**

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless, but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion contact a poison control center immediately.

## CLIMBING ROSES

\*Image on cover is representative of the type of plant(s) in this offer and not necessarily indicative of actual size or color for the included variety.

## OUT OF THE BOX

### CLIMBING ROSES

Your plants have been shipped to you in pots or bareroot form. We urge you to remove them from the shipping box and plant them as soon as possible. Should planting be delayed due to weather or other unforeseen circumstances, roll the plastic bag down around each potted plant and place them near a bright window or other sunny location. Keep them well-watered in their pots until permanently planted. Bareroot plants should be kept in a cool, dark place. Once planted, they begin setting roots and, as the weather warms, begin showing new growth. Please plant as soon as possible, provide reasonable care and be patient.

The foliage on potted plants may appear slightly wilted or yellow upon arrival. This is due to the stress of shipping and is usually nothing to worry about. Water the plant thoroughly, place it in a shady location and remove any foliage that does not recover.

4-INCH POT

1-GALLON POT

BAREROOT

SHIPPED AS SHOWN

## PLANTING INSTRUCTIONS

### PLANTING POTTED CLIMBING ROSES

**Important:** Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

1. Remove and discard the clear plastic bag from around the pot.
2. After watering, separate the root ball from its pot by holding the plant upside down in one hand and squeezing the sides of the pot with the other.
3. Prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork, or gardening tool and pruning any damaged roots. This will encourage the roots to begin growing outward into the new soil.
4. Dig a hole twice as deep and twice as wide as the plant's root ball. Partially backfill the hole with soil and place the plant into the hole. The top of the root ball should be level with the ground surrounding the hole. Refill the hole with soil, firming the soil around the plant with your fingers. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.
5. Water thoroughly.

## PLANTING INSTRUCTIONS

### PLANTING BAREROOT CLIMBING ROSES

Dig a hole 12-18 inches deep and equally as wide. Build a mound of soil in the bottom of the hole on which to place the roots. Position the plant atop the mound so the bud union (a bulge on the stem of the rose plant where the rose has been grafted onto the roots) is above ground level. Fill the hole halfway with soil, firm around the roots, water, then fill the remainder of the hole with soil and water again.

### CONTINUING CARE

#### WATERING

Adequate and consistent watering is essential during your plant's first year in the garden. Infrequent, long soakings of water that thoroughly saturate the soil are more effective than frequent, light applications of water.

Due to variable geographical and environmental conditions, a specific watering schedule is difficult to define. However, as a rule of thumb, you should not allow the soil to completely dry out. During periods of drought and extreme summer heat, you may need to water as often as every few days during the first summer. To determine if your plant needs water, dig a few inches into the soil next to the plant. If the soil is dry 2-3 inches below the surface, it is time to water.

Overwatering can be as damaging as under watering. Be sure that the area surrounding your plant has adequate drainage to move water away from the plant. If you choose to plant in a container, always select one with drainage holes to prevent your plant's roots from sitting in water.

#### WEEDING

Keep the area around your plants free of weeds. Weeds compete with surrounding plants for food, water and light. Walk around the garden periodically and pull weeds, including the roots, as soon as you see them.

#### TRAINING

Climbing roses produce main canes from the base which form the structure of the plant. Each main cane produces lateral shoots that bear flowers.

Climbing roses are not self-clinging and need to be tied to a support such as a trellis or fence. Make sure the support you choose is firmly anchored and sturdy enough to support the weight of a mature plant. As the rose grows, attach the main canes to the support with plant ties or strips of flexible cloth.

## CONTINUING CARE (Continued)

#### MULCHING

Apply a 2-4 inch layer of shredded bark, compost, leaves, straw or other organic matter around your plants to promote moisture retention, maintain even soil temperatures and discourage weed growth. Replenish the mulch as needed.

#### FEEDING

Roses are heavy feeders, especially when they are in active growth and bloom. Feed your roses once every 2-3 weeks during the growing season with a water-soluble fertilizer for roses. Discontinue feeding after September 1st so your plants harden off for winter dormancy. Resume fertilizing when new growth appears in spring.

#### PRUNING

Remove spent blossoms to promote continuous flowering by pinching or cutting off the blossoms as they fade.

Before new growth begins each year, prune to remove any dead or damaged wood. Climbing roses need only minimal pruning when newly planted.

The second growing season select 3-4 strong canes to "climb" and remove other canes. Once the rose has reached the desired height, keep suckers off the lower part of the plant and prune damaged or weak lateral canes at the top. Little pruning is required going forward, though laterals may be pruned severely if desired.

#### WINTERIZING

Watering thoroughly in late fall will greatly enhance your plant's cold tolerance once the ground has frozen.

Climbing roses should be winterized in late fall. In extremely cold areas, canes may be tied together on their support and wrapped in burlap. When winterizing roses, keep in mind that the root system and any grafts are the most vulnerable to cold damage. Mulch heavily by mounding a 6-8 inch layer of loose soil, shredded bark, compost, leaves, straw or other organic material over the crown of each plant to prevent winter damage.

In very cold areas, containerized roses can be brought into an unheated, protected area such as a garage or cellar before temperatures drop below freezing. Check soil moisture every 2-3 weeks and water as needed during winter.

In spring, remove mounded soil or mulch from in-ground plantings. Containerized plants should be moved back out into the garden sunlight where they will begin to repeat their yearly garden performance.
