

## QUICK REFERENCE PLANTING GUIDE

LIGHT/SUN EXPOSURE	Full to part sun.
USDA HARDINESS ZONES	4 to 10.
PLANT TYPE	Perennial.
PLANTING DISTANCE IN-GROUND	At least 5 feet apart.
CONTAINER SIZE	One plant per 20-inch or larger container.
MATURE HEIGHT / SPREAD	<p><b>Cherry Parfait:</b> 2 to 3 feet tall with a similar spread.</p> <p><b>Curly Pink:</b> 3 to 4 feet tall with a 2 to 3 foot spread.</p> <p><b>Double Pink Knock Out®:</b> 4 feet tall with a similar spread.</p> <p><b>Double Red Knock Out®:</b> 4 feet tall with a similar spread.</p> <p><b>Heatwave:</b> 3 feet tall with a similar spread.</p> <p><b>Helen Hayes:</b> 3 to 4 feet tall with a 2 to 3 foot spread.</p> <p><b>JFK/Mr. Lincoln:</b> 3 to 4 feet tall with a similar spread.</p> <p><b>Julia Child:</b> 3 to 4 feet tall with a similar spread.</p> <p><b>Little Miss Dynamite (JALdynamite):</b> 24 to 36 inches tall with an 18 to 24 inch spread.</p> <p><b>Maria Stern:</b> 3 to 4 feet tall with a similar spread.</p> <p><b>Redgold/Angel Face:</b> 3 to 4 feet tall with a similar spread.</p> <p><b>Rio Samba:</b> 5 to 6 feet tall with a 3 to 4 foot spread.</p> <p><b>Tequila:</b> 4 feet tall with a 3 foot spread.</p>
BLOOM TIME	Early summer to frost.
TIME TO REACH MATURITY	3 years.
FACTS OF NOTE	Rabbit resistant. Heat tolerant. Great for cut flowers.

### Cottage Farms' Guarantee

We aren't happy if you aren't happy. Cottage Farms warrants its perennials for 1 year and annuals for 90 days from the time of the shipment. If for any reason you are dissatisfied, Cottage Farms will replace your plant with a similar or comparable one at no charge. If your replacement is not available or it is too late in the season to ship, it will ship the following shipping season.

**Caution: Do not assume any plant is safe to eat. Only parts of plants expressly grown to be eaten should be considered edible. As with any product that is not food, care should be taken to make sure that small children and pets do not ingest any part of a plant that is not expressly grown to be eaten.**

Unless specifically stated, this product is intended for ornamental horticultural use only and is not intended for consumption or ingestion by humans or pets. Most plants are harmless but some contain toxic substances which can cause adverse health effects. Furthermore, some individuals and some animals are sensitive or allergic to certain plants and precautions should be taken to limit or avoid physical contact with particular plants. Some plants have thorns or spines that can be painful if handled.

**In case of ingestion contact a poison control center immediately.**

## OUT OF THE BOX

### GARDEN ROSES

Your plants have been shipped to you in pots or in bare root form. Please remove the plants from the packaging right away and plant them as soon as possible following the planting instructions below. If it is not possible to plant them right away, follow these important steps:

#### POTTED PLANTS

1. Roll the plastic down around each plant and place them in a sunny location.
2. Keep the plants well watered.

**Note:** Some leaves may appear wilted or yellow upon arrival. This is due to the stress of shipping and is nothing to worry about. Water the plant and let it recover for few days, then gently remove any foliage that does not recover to allow for new growth.

#### BARE ROOT PLANTS

1. Place the plants in a cool, dark place such as a refrigerator, unheated garage or basement.
2. Keep the roots moist by using a spray bottle to mist them.

**Note:** The roots of your bare root plant are coated with Terra-Sorb® Hydrogel to protect them from drying out during handling and transport. It is suitable for planting and should be left on the roots at planting time.

#### BARE ROOT

#### POTTED

## SOIL PREPARATION

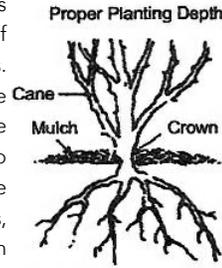

We recommend having your soil tested periodically by your local County Extension Office ([www.nifa.usda.gov/extension](http://www.nifa.usda.gov/extension) or by calling 1-800-333-4636). A soil test can determine if your soil needs any amendments to enhance the growth and performance of your plants.

Ideal garden soil is easy to dig in and drains well while still holding the nutrients and water vital to plant growth. To prepare a bed for in-ground planting, spade or till the soil to a depth of roughly 12-18 inches. Next, spread a 2-4 inch layer of organic matter such as compost, shredded leaves or peat moss over the soil and mix well.

## PLANTING INSTRUCTIONS

### PLANTING BARE ROOT ROSES:

Dig a hole 12-18 inches deep and equally as wide. Build a mound of soil in the bottom of the hole on which to place the roots. Position the plant atop the mound so the bud union (a bulge on the stem of the rose plant where the rose has been grafted onto the roots) is above ground level. Fill the hole halfway with soil, firm around the roots, water, then fill the remainder of the hole with soil and water again.

### PLANTING POTTED ROSES:

**Important:** Thoroughly hydrate the plant by submersing the root zone in a container of water for 10 minutes while you prepare for planting.

1. Remove and discard the clear plastic bag from around the pot.
2. After watering, remove the pot by holding the plant upside down in one hand and squeezing the sides of the pot with the other.
3. Prepare the root ball for planting by gently disturbing the surface roots with your fingers, fork, or gardening tool and pruning any damaged roots. This will encourage the roots to begin growing outward into the new soil.
4. Dig a hole twice as deep and twice as wide as the plant's root ball. Partially backfill the hole with soil and place the plant into the hole. The top of the root ball should be level with the ground surrounding the hole. Refill the hole with soil, firming the soil around the plant with your fingers. Check to be sure the plant is not planted too deeply. If it is, raise the plant carefully and re-firm the soil.
5. Water thoroughly.

## CONTINUING CARE

MULCHING	Apply a 2-4 inch layer of shredded bark, compost, leaves, straw or other organic matter around your plants to promote moisture retention, maintain even soil temperatures and discourage weed growth. Replenish the mulch as needed.
WEEDING	Keep the area around your plants free of weeds. Weeds compete with surrounding plants for food, water and light. Walk around the garden periodically and pull weeds, including the roots, as soon as you see them.
FEEDING	Feed your roses once every 2 to 3 weeks with a water soluble fertilizer for roses. Discontinue feeding after September 1st to allow the plants to harden off for winter dormancy. Resume fertilizing when new growth appears in the spring.

## CONTINUING CARE (Continued)

### WATERING

Adequate and consistent watering is essential during your plant's first year in the garden. Infrequent, long soakings of water that thoroughly saturate the soil are more effective than frequent, light applications of water.

Due to variable geographical and environmental conditions, a specific watering schedule is difficult to define. However, as a rule of thumb, you should not allow the soil or original root ball to completely dry out. During the plant's first summer in the garden, you may need to water as often as every few days in periods of drought and extreme summer heat. To determine if your plant needs water, dig a few inches into the soil next to the plant. If the soil is dry 2-3 inches below the surface, it is time to water.

Overwatering can be as damaging as under watering. Be sure that the area surrounding your plant has adequate drainage to move water away from the plant. If you choose to plant in a container, always select one with drainage holes to prevent your plant's roots from sitting in water.

### PRUNING

Pruning improves the quantity and quality of the blooms. Remove spent blossoms to promote additional flowering by pinching or cutting off the blossoms as they fade.

In early spring, prune to remove any weak, dead or damaged wood and to improve the shape of the plant. Keep the center of the rose open to allow for air circulation by pruning off inner branches or canes that have become overlapped. Thin, weak canes can be removed at any time.

### WINTERIZING

Watering thoroughly in late fall will greatly enhance your plant's cold tolerance once the ground has frozen.

Roses should be winterized in late fall. When winterizing roses, keep in mind that the root system and any grafts are the most vulnerable to cold damage. In extremely cold areas, mound a 6-8 inch layer of loose soil, shredded bark, compost, leaves, straw or other organic material over the crown of each plant.

In very cold areas, containerized roses should be moved into an unheated, protected area such as a garage or cellar before temperatures drop below freezing. Check soil moisture every 2-3 weeks and water as needed during winter.

In spring, remove mounded soil or mulch from in-ground plantings. Containerized plants should be moved back out into the garden sunlight where they will begin to repeat their yearly garden performance.
